**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Very windy with some chill effect, but generally mild. Some very strong gusty winds even on lower leeward slopes. Strength of wind will cause mobility issues and bring risk of being blown over.

Forecast for Wednesday 24 Feb 2021

Weather: Cloudy, mild and windy with further outbreaks of rain, some heavy, but clearing to showers in evening.

Maximum wind: South to southwest 30-35 gust 45mph, but 45 gust 60mph over higher tops. Decreasing 25-30 gust 40mph through the morning and turning westerly in evening.

Chance of cloud free mountain/hill tops above 800m: Not much chance until improving 40% in evening

Visibility: Poor or very poor at height with extensive cloud above 400-500m, becoming more broken and lifting above tops at times in evening as rain clears. Moderate occasionally poor beneath cloud until evening too.

Temperature: **Valleys:** Plus 9-11C falling to plus 5C later
At 800m: Plus 6C falling to plus 2C later
Freezing level: Above the summits

Mountain Weather Forecast

Ground Conditions Supplement

Date: Monday 22 February 2021. Location: Helvellyn summit at 11:40 Full report: We are continuing to provide the Fell Top Reports for people undertaking their daily local exercise during the lockdown. We would like to remind everyone that Government guidance stipulates that people should only exercise locally to where they live. The Lake District fells and most paths are now generally clear of snow. The remaining patches can be found on N through E aspects above 800m. The snow is generally soft apart from where it has been compressed by walkers feet. Additionally there are still some large areas of sheet ice to contend with especially around the edges of the snow patches. If you do stray onto the snow, through choice or necessity, then winter equipment such as an ice axe, crampons and or microspikes will be very important in keeping you safe. With careful route choice Striding Edge can now be climbed without setting foot on snow with a clear line up the headwall on climbers left. This can be tricky to find in descent. The easier lines on the northern flank of the ridge are still very snowy / icy. Swirral Edge is still pretty wintery and the extra security of an ice axe, microspikes and or crampons will be appreciated by most walkers as there are a number of unavoidable snow patches above large drops to cross. There are still some large and unstable cornices above N through E aspects which are slumping in the warmer temperatures. Please give them a wide berth and advise others with less experience to do likewise. As a result of the winters freeze thaw action there is now also a lot of loose rock on the fells including on popular routes such as the Helvellyn edges. Although it felt like spring on the fells today we are still very much in the middle of the winter season so please be prepared with plenty of warm and waterproof layers, a reliable and accurate way of navigating, a headtorch and plenty of food & drink plus any winter equipment required to keep you safe on your chosen route. Please be conservative with your plans and know both your limits and also when to turn back. Temperature: plus 1.0 C, Maximum wind speed 13.5 mph, Wind chill: minus 5.4 C, Average wind speed: 10.7 mph.
